

Date: _____

Dear _____,

I have done my research about WiFi (wireless computers and cell phones) and I am not just trying to get out of school. I am serious.

These are the reasons why I don't want to go to school until the WiFi is removed and cell phones are banned from the school grounds. And it's not enough for you to say cell phones have to be turned off, cause no one listens.

1. Did you know that children's brains are way smaller, so it affects us way more. And we have more water in children's brains so electromagnetic radiation is conducted faster and stronger.

"Of particular significance for children are studies which indicate that children absorb more radiation in the brain than adults which may indicate a greater risk of brain tumours."

"A two-minute cell phone call alters a child's brain function for an hour."

*(*The child scrambler-What a mobile can do to a youngster's brain in 2 minutes", UK Sunday Mirror, April 1, 2004.)*

2. Cell phones have 2.4 ghz frequency, but wireless can have up to 6 ghz frequency. But scientists say it is not the frequency that is so important, but the second carrier wave (the information carrying radio wave - ICRW) and the fact that it is pulsed, that is the main health problem. This is why I don't think I should go to the school if it has wifi. All these countries have banned wifi in schools, why can't we?

"The Public Health Department of Salzburg has warned that WiFi should not be put in schools or nurseries. The Austrian Medical Association is lobbying against the deployment of WiFi in schools."

(http://www.mastsanity.org/index.php?option=com_docman&task=doc_download&gid=2&Itemid=64 2005)*

"The Bavarian Parliament has recommended that no schools in the province use wireless LAN networks. The Frankfurt City Government said that it would not install WiFi in its schools until it had been shown to be harmless."

(<http://wifiinschools.org.uk/10.html>)*

"Professor Johansson at the Department of Neuroscience at the Karolinska Institute in Stockholm has sent a letter advising against the use of WiFi to Swedish School Governors."

3. Children absorb more radiation than adults, so the risk for me is much higher than for you. So you can't keep telling me what to do because it's my body.

"The Stewart Report (2000) states that children absorb more energy per Kg of body weight from an external electromagnetic field than do adults."

"A 5 year old will absorb around 60% more than an adult (*Stewart Report, 2000*)."

"Exposures in bone marrow may be up to ten times greater in children than adults (*Microwave news, 2008, 22nd July*)."

4. This is something for you, when you use your cell phone in the car. If you just turn it on, it sends out radiation and it's the worst when you have your windows closed, because it bounces all over the car and can't get out. So, if you just turn it on in the car, you'll feel like you've been using it for hours. Plus, if other people are in the car, you're damaging them too.

"Don't talk on a cell phone while in a vehicle, on a train, bus, plane, or subway. These enclosed areas trap radiation and consequently exposure becomes higher in these enclosed metal surroundings. They also impede the signal so your cell phone must use more power to maintain the connection."

(**Cell Phone Poisoning of America*" by Lynn Quiring, RPh, CCN, NMD)

5. Did you know that radiation can disturb my learning and damage my brain function?

"Scientists have discovered that a call lasting just two minutes can alter the natural electrical activity of a child's brain for up to an hour afterwards.

And they also found for the first time how radio waves from mobile phones penetrate deep into the brain and not just around the ear.

The study by Spanish scientists has prompted leading medical experts to question whether it is safe for children to use mobile phones at all.

Doctors fear that disturbed brain activity in children could lead to psychiatric and behavioural problems or impair learning ability.

It was the first time that human guinea pigs were used to measure the effects of mobile phone radiation on children. The tests were carried out on an 11-year-old boy and a 13-year-old girl called Jennifer."

(**The child scrambler—What a mobile can do to a youngster's brain in 2 minutes*", UK *Sunday Mirror*, April 1, 2004.)

6. Many of the kids in class have their cell phones on and so it is giving me radiation

and there's nothing I can do about it. What if you made a rule that all the cell phones have to be put in a basket on the teacher's desk every morning – and then someone checks to make sure they're all turned off? Kids get them back at the end of the day. Then you do spot-checks in kid's backpacks, desks and pockets. If you find a cell phone, they are suspended for three days. You would only have to do this a few times and then no one would even try to hide a cell phone.

"The body of available research indicates that operation of a nearby portable cellular telephone will expose a non-user to radiation, some of which will be deposited into the brain of the non-user at levels higher than necessary to elicit undesirable biological effects even though the phone may be more than ten feet away from the non-user."

*(*Robert Kane, PhD., former Motorola Senior Research Scientist)*

I need you to please take this seriously, because it's my body and my health and we need to come up with a plan to protect me.

Sincerely,
